## 

# EDUCATION MANAGEMENT SYSTEM

Campus is an education management system (EMS) designed and developed to ease and enhance the educational processes and experience within universities. Three interconnected modules cover all the needs of a university from application to acceptance and admission, from enrolment of new students to leading them through their individual studies towards graduation.

Campus tracks the progress and performance of each student together with all concomitant events that might occur during the studies. The system excels in providing accurate and immediate insight at multiple levels, from a single student to an entire faculty.

Covers all activities leading up to the enrolment of a new student. Admission plans define the expectations and limits of a new admission period. Campus monitors adherence to the plans and ensures that due admission process is followed for each applicant.

Follows the students along their individual journeys through the semesters, collecting and accumulating all related data like the student's profile, program, specialisations, standing and performance, attendance, financial and extraordinary events.

#### Results Module

Deals with results at the level of exams and semesters. Great care was taken to keep Campus flexible enough to adapt to a particular university's rules and regulations. To that end, Campus offers multiple areas where its behaviour can be customised and overridden if necessary.

The activities in this module are twofold: defining and following up on admission plans, and processing student applications from reception to acceptance. Together, these two activities ensure an orderly and controlled admission phase from beginning to end.

Student quotas based on multiple criteria Acceptance thresholds per academic program

Processing of applications individually or in bulk

Automatic calculation of grade equivalencies

Support for multiple application channels

Multiple application status reports

Electronic submission and inspection of supporting documents

Multi-step vetting process including medical check and language mastery

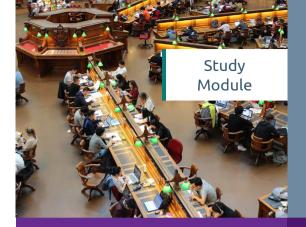

Multiple academic programs per department

Multiple specialisations per program, for example minor and major Time tables including room and lecturer assignments

This module covers all activities and functionality to lead the students through their studies from enrolment to graduation. In addition, it governs the academic calendar and the study plans for all programs including their specialisations and the conditions to proceed to a following semester.

Campus records and preserves all data points that accumulate throughout the semesters and can report on them at any time and on multiple levels. The same information can flow into letters and forms for interaction with external parties.

Definition of registration and tuition fees

Automatic calculation and issuing of invoices

Powerful templating engine for letters and forms

Student search based on multiple criteria

Support for extraordinary events like leave of absence or warnings

Generation of final and intermediate transcripts Integration with Moodle

Automatic semester decisions according to university rules

Ability to override semester decisions

Campus tracks the performance of all students and keeps their semester GPAs and overall CGPA current at all times. Among other factors, these influence the progression of a student to higher semesters. This module offers great malleability to adapt to a university's specific rules and regulations.

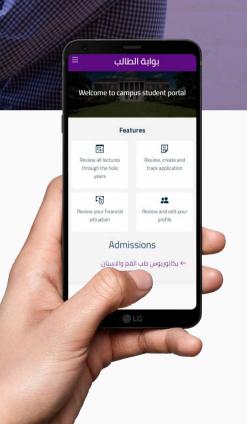

## Campus Student Portal

#### What is Campus student portal?

Student portal is a tool integrated by Campus aimed towards achieving better academic experience for students.

### How can the portal benifits the students?

- Future students apply to their desired programs.
- keep track of all lectures and activities by browsing the calendar and schedule.
- students can keep track of their GPA and CGPA scores.
- doing all the financial commitments and more.
- linked to online courses integrated with LMS.

Students apply to their desired programs in all the offered fields and manage all their applications.

To apply, students need to build and manage their profile and personal info to make sure they get accepted.
